Software Development Skills

Programming: C#, TypeScript, JavaScript, C / C++, SQL, HTML

Database: MSSQL Server, PostgreSQL, MySQL

Technologies: OOP, Entity Framework Core, ASP.NET Core, .NET Framework, LINQ, Angular, Bootstrap, SignalR, Hangfire, Firebase, IIS Server

Concepts: SOLID Principles, Design Patterns, Clean Code, Git, Agile / SCRUM Methodologies, ClickUp

Experience

[BacBon Limited, Dhaka, Bangladesh](#)

December 2022 - Present

Software Engineer

- Customized LMS applications to address diverse client requirements by implementing Trainer/Mentor panels, Batch Management, and User Management modules.
- Enhanced user engagement through **email notifications**, interactive training modules, **gamification** features, and integration of **RESTful APIs** with third-party services like **SMS Gateway**.
- **Automated data backup processes** by scripting manual and scheduled backups, improving system recovery speed by **50%** and reducing downtime incidents by **40%**.
- Migrated legacy LMS (.NET Framework 4.7) to a scalable, multi-tenant SaaS architecture using .NET Core, improving security and client isolation.
- Optimized a legacy LMS on .NET 4.7 and Angular 13, achieving 40% faster performance through database indexing, raw SQL optimization, frontend improvements, and reduced server calls.
- Gathered client requirements, analyzed workflows, and designed user interaction flows to guide development teams; conducted on-site and online client training sessions.
- **Tech Stack:** .NET Core, .NET Framework, Angular, Web API, MSSQL Server, IIS Server, Hangfire, Modeling the Entity, Firebase

[Enlight Solutions Limited, Dhaka, Bangladesh](#)

March 2022 – November 2022

- Implemented **features, APIs, and bug fixes** in **Angular** and **ASP.NET Core**, designed **databases and SQL views**, integrated **SSLCOMMERZ Payment Gateway**, developed **common Angular components**, and contributed to **mock-up and planning**.
- **Tech Stack:** .NET Core, Web API, Angular, SignalR, PostgreSQL

[JICA Bangladesh, Dhaka, Bangladesh](#)

January 2020 – July 2020

- Understand the **current car roster and driver management system** at the JICA office, gather requirements through consultations, and develop a **customized system** with reporting features based on user feedback.
- **Tech Stack:** Excel, VBA, Macros

Education

American International University-Bangladesh, Completed Master of Science in Computer Science

East West University, Completed Bachelor of Science in Computer Science & Engineering

“The Complete Node.js Course” Provided by Pondit Training.

Project Experience

Amader Academy

Project Link: <https://amaderacademy.com/>

Developed and maintained a comprehensive Learning Management System (LMS) with features including course creation, instructor assignment, student enrollment, question bank, job portal integration, company management, and course purchasing. Responsibilities included database design, report generation, writing complex SQL queries and views, integrating APIs and payment gateways, managing users and notifications, and handling bug fixes, enhancements, and client-driven modifications.

Utsab Platform

Designed and developed a centralized platform enabling customers to book rental/non-rental services and service providers to manage partners and offerings. Streamlined service coordination, reducing manual scheduling efforts by 40% and lowering partner onboarding time by 60%. Eliminated fragmented workflows and improved customer response times through real-time order tracking and partner management tools.

SPCSSECP

Developed and deployed a scalable e-Training Platform for the ADB-funded “Supporting Post-COVID-19 Small-Scale Employment Creation Project,” facilitating digital training for 30,000+ CMSE trainees—including youth, returning migrants, and women entrepreneurs—supporting the goal of creating 45,000 jobs. Implemented interactive learning modules, real-time progress tracking, and automated certificate generation, which enhanced learner engagement, streamlined performance monitoring, and increased training efficiency by 40%, while reducing operational costs compared to conventional offline training methods.

Corporate LMS Platform

Developed and maintained a scalable LMS serving 10,000+ users across multiple banks, enabling efficient course management, interactive training, and real-time progress tracking.

Led system modeling, SQL & LINQ reporting, API integration, auth management, trainer panel development, and client training; delivered updates and bug fixes based on feedback.
